Bugfixes

- Lookup autosave feature replaced by a save button, to avoid problems with required fields.
- Error messages displaying in lookup fields after changing from/to specific values, due to async events.

Version 2.6 (Aug 29, 2023)

New & Changed Features

Added support to search fields (Lookup and Master-Detail relationships).

Bugfixes

Button and input borders were showing darker inside opportunities after a recent Salesforce update.

Version 2.5 (Aug 26, 2023)

Direct Link to install in Production/Dev Org	https://login.salesforce.com/packaging/installPackage.apexp?p0=04t5e000000NsFB

New & Changed Features

The **Select a Pricebook** message was replaced by a more discreet notification, avoiding unnecessary and repetitive actions on new records.

Bugfixes

Numeric fields saving as zeros instead of null/empty, when user doesn't pass any value.

Version 2.4 (May 30, 2023)

Direct Link to install in Production/Dev Org	https://login.salesforce.com/packaging/installPackage.apexp?p0=04t5e000000NsEr

New & Changed Features

You can now **Edit** the **Pricebook** field from the Opportunity, Quote or Order directly from the component.

Bugfixes

Component not refreshing properly after an external Pricebook change (ex: when editing it using details or related list components).

Direct Link to install in Production/Dev Org	https://login.salesforce.com/packaging/installPackage.apexp?p0=04t5e0000012CNR

New & Changed Features

The component is now compatible with **Quote** and **Order** objects, besides **Opportunity**.

All the fields in the pricebook and opportunity product layouts are now **editable** and organized into **sections** (see [instructions](#)).

There is now a **draft state** when adding a product, allowing you to edit it before saving (ex: required fields, validation rules, etc..).

Texts are now all **dynamic and editable**. Standard ones come from the Org, and custom ones are being stored as labels.

The labels are currently in English and Portuguese. To **see, edit and add** translations, use the **Translation Workbench**.

You can now change the **quantity of records per line**, and the **width of the lists**, for both pricebook and opportunity product lists.

The layout overall was **restyled**, in order to make better use of space and improve visibility.

The automatic filling of common fields when adding a product (based on the entry and product record) is now **optional**.

The automatic calculation now works **in reverse and in real time**, calculating totals based on quantity, price and discount.

Fields that have a default value appear now **populated** with this value when adding a product.

Bugfixes

Component not working properly due to compatibility issues with the "Lightning Web Security" feature.

Sortable framework not loading sometimes, due to concurrent processing issues.

Component showing errors when submitted to extremely large amounts of products, due to SOQL limits.

Price slider almost invisible and not resetting after a new search, leading to some misinterpretations.

Non-responsive buttons overlapping other components, even inside large size containers.

Products not showing up due its "isActive" flag being false.

Retired Features

Custom color (green) for price fields on the pricebook product layout.

Option to show additional fields inside a popover when placing the cursor over the "i" icon, on the pricebook product layout.

Option to restore the value of an individual field (unit price and description), on the opportunity product layout.
